Re: NCPA Sends Small Business Community Pharmacy Recommendations, Needs to Administration's Coronavirus Task Force

Dear Amy,

Attached you will find NCPA's recommendations to the Trump Administration on how our members can and are helping during the COVID-19 public health emergency. However, in order to remain viable and keep doors open to provide continued access and care, I wanted to reach out about a few very important asks to CMS:

1. Immediate suspension of all pharmacy direct and indirect remuneration (DIR) fees.
2. Waiver of all audit requirements in Chapters 9 and 21 in the Medicare Prescription Drug Manual, specifically medication delivery documentation and signature log requirements, indefinitely until the coronavirus crisis subsides. Patient are refusing to sign receipt of their medications due to fear of contracting the virus from communal pens. We ask CMS to require Pharmacy Benefit Managers to also temporarily suspend their audit requirements relating to the same.
3. Suspend contract negotiations at this time or extend deadline for PBM's to get back their bids/info to CMS from 1st week June, to 1st week of July at a minimum.
4. Allow pharmacists to deliver or mail any medication to patients' homes. I know your guidance last week discussed this, but we are still hearing of PBMs not allowing our members to mail. Please make this mandatory.

Unfortunately, in this time of crisis PBMs are still coming into pharmacies to conduct audits and are forcing signatures of take it or leave it Part D contracts. As its more and more obvious, pharmacies and grocery stores are the few entities that remain open. Our members need relief from these federal requirements to stay open and help their patients.

I'm happy to discuss further.

Thank you,

Ronna B. Hauser, PharmD
Vice President, Policy & Government Affairs Operations
National Community Pharmacists Association

RE: Community Pharmacists' Recommendations to the President's Coronavirus Task Force

Dear Vice President Pence:

The nation's 21,000 community pharmacies, including independent and small regional chains which are locally and regionally owned, are located in all U.S. states and territories. Our members stand ready to assist the President's Coronavirus Task Force in fighting this pandemic.

Attached you will find community pharmacists' recommendations on how our members can help, including testing for COVID-19 as availability of diagnostic testing increases. Over 10,000 locally-owned pharmacies provide home delivery services and over 5,000 have the ability to compound necessary medications and preventative needs, such as hand sanitizer.

However, in order to remain viable and keep doors open to provide continued access and care, independent community pharmacists need an immediate suspension of all pharmacy direct and indirect remuneration (DIR) fees that pharmacy benefit managers (PBMs) assess on pharmacies. These post point-of-sale clawbacks are wreaking havoc on the business operations of our members and are a threat to their ability to offer these services.

We also need several allowances in order to continue to provide life-saving medications to our patients in this time of emergency, such as waiving all requirements for patient signature or other delivery verification requirements that put our members and their staff and patients at increased risk of acquiring coronavirus.

NCPA asks the Administration to implement the policies contained in the attachment in a broad, consistent manner, unlike the patchwork policies that PBMs have implemented to date.

Community pharmacies are open and ready to assist. Please contact me at 703-838-2648 or doug.hoey@ncpa.org, or my colleague Ronna Hauser, vice president of policy, at 703-838-2691 or ronna.hauser@ncpa.org with any questions you may have about how independent pharmacies can help our country during this urgent time.

Sincerely,

B. Douglas Hoey, RPh, MBA
Chief Executive Officer

Mark Meadows, Chief of Staff, The White House

Community Pharmacists' Recommendations to the Administration During COVID-19 Pandemic

The **National Community Pharmacists Association (NCPA)** represents over 21,000 community pharmacies nationwide (independent and small regional chains, locally/regionally owned), located in all U.S. states and territories.

Centralized coordination: Infrastructure is already in place (including [CPESN](#), which uses interoperable care plans) for coordinating nationally, regionally or locally, including immediate roll-out. Independent community pharmacies can scale quickly, are flexible, and are extremely adaptable in both urban and rural communities.

Impact in rural communities: Using independent community pharmacists is the best alternative for communicating and engaging with rural communities, especially since independent community pharmacists are trusted, well-established health care providers in their communities. *There are 6,400 pharmacies located in rural communities with pharmacists sometimes the only health professionals serving area residents.*

How community pharmacists can help:

- Use local pharmacists to give the COVID-19 test, as availability of tests and versatility of available tests develop.
- Testing site access for COVID-19.
- Provide home delivery services to allow patients to stay at home. Many pharmacies also have drive-thru windows.
- Compound hand sanitizer. Per recently released [FDA guidance](#) on compounding alcohol-based hand sanitizer, thousands of local pharmacies are capable of making product available in their respective communities.
- Provide up-to-date influenza and pneumonia vaccinations to prevent co-occurring disease. Independent pharmacies are perfectly positioned to mass immunize once a vaccine is developed for COVID-19.
- Test for influenza and strep, which assists physicians in triaging patients. Forty-four states allow for pharmacist point-of-care testing.
- Prescribe medications via collaborative practice agreements and keep primary care practices, emergency rooms, and hospitals clear for more serious cases.
- Educate via dispersion of appropriate literature to the public.
- Relief of symptoms. Pharmacists are providing over-the-counter (OTC) medications, supplies and counseling.

What independent community pharmacies need to provide continued access and care:

- Suspend all pharmacy direct and indirect remuneration (DIR) fees assessed on pharmacies immediately.
- Make tests for COVID-19 and protective equipment available to small business pharmacies to test staff/patients.
- Waive all requirements for patient signature or other delivery verification requirements.
- Allow pharmacists to compound commercially available prescriptions if there are drug shortages.
- Allow pharmacists to dispense early refills and emergency refills for maintenance medications.
- Instruct PBMs to allow 90-day prescription refills at any network pharmacy with commensurate reimbursement.
- Authorize pharmacists to conduct therapeutic interchange without physician authorization if drug shortages exist.
- Allow pharmacists to deliver any medication to patients' homes.

NCPA asks the Administration to immediately implement the above policies in a broad, standardized manner, unlike the patchwork policies that PBMs have implemented to date.
